01 / BAVORA · UI CASE STUDY

Travel choices, made clearer.

Bavora / A visual interface case study by Muthu Vairavan.K

A travel planning concept built around a simple idea: give every package the same information structure, then make that structure easy to read.

Role	**Tools**	**Scope**
UI/UX Designer	Figma · Auto Layout Wireframes · Prototypes	14 supplied interface screens Desktop & mobile design work

COMPARE	Bali Reset Escape	Kyoto Culture Route	Indonesia Escape
Stay	3-star	4-star	5-star
Meals	Daily breakfast	5 breakfasts	All meals

Design concept · Sample package information from the supplied landing page · No live offers

02 / BAVORA · UI CASE STUDY

The UI brief.

Help travelers discover, understand and compare packages without presenting every detail at once.

The starting point

Package pricing, hotels, meals, transport and activities are often difficult to evaluate when presented in different formats.

The interface response

Use predictable cards, clear headings and aligned comparison categories. Give the traveler a visible next action at each stage.

What this case study covers

Visual hierarchy, color roles, typography, layout, repeated interface patterns, key-screen reasoning and proposed refinements.

Evidence: supplied designs and project details. Research results and measured improvements have not been provided.

03 / BAVORA · UI CASE STUDY

A calm visual direction.

Navy gives the interface structure. Teal highlights actions. Pale surfaces leave room for the travel content.

Navy	**Teal**	**Pale blue**	**White**
#112B40 Navigation & emphasis	#126779 Search & primary actions	#EDF5F9 Soft content surfaces	#FFFFFF Cards & form groups

Color has a job.

The palette supports hierarchy rather than decorating every element. Status colors should be reserved for meaningful feedback, such as booking confirmation or form errors.

These are representative case-study color values derived from the design direction, not verified source tokens.

04 / BAVORA · UI CASE STUDY

Type that separates inspiration from information.

The supplied designs pair editorial-style headings with practical sans-serif interface text.

Plan Better Trips.
Compare Smarter.

Editorial headings

Use prominent headings for the hero and major sections. Short lines keep the message easy to scan.

Interface text

Keep package facts, form labels, navigation and buttons consistent. Let size, weight and spacing establish order.

Section title / 32

Package title / 24

Body text / 20 — practical information in a readable rhythm.

Supporting label / 14

This editable document uses Libre Baskerville and DM Sans. Exact original font families were not established from the screenshots.

05 / BAVORA · UI CASE STUDY

A consistent layout rhythm.

Repeated alignments help practical travel information feel predictable.

Group related information

Keep price, duration and inclusions together inside each package card. Use spacing to separate different tasks.

Use detail progressively

The landing page introduces the offer, the detail page expands it, and the comparison page aligns it across options.

Responsive intent

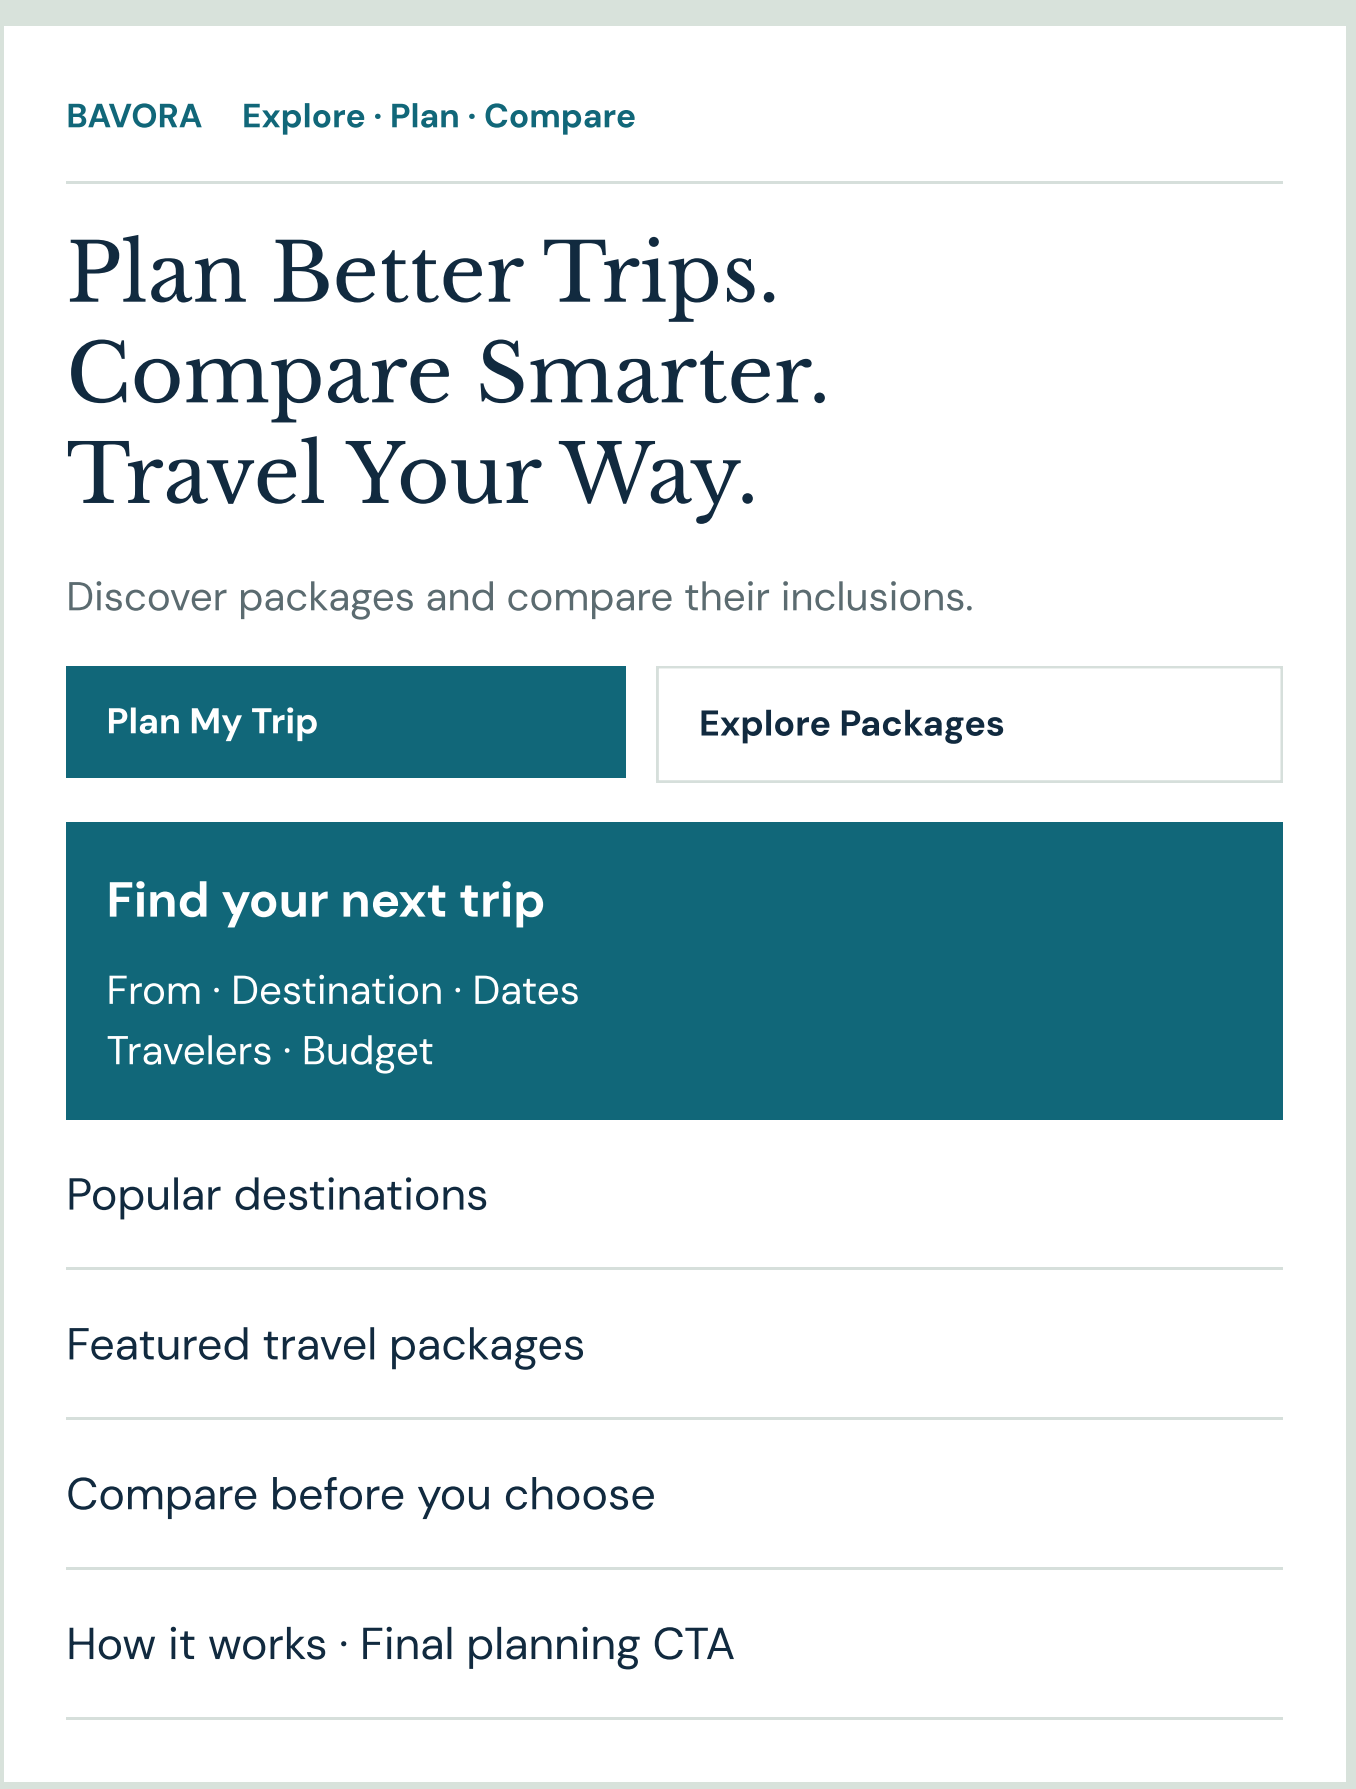
Use a 390 px mobile baseline, 16 px margins and an 8 px spacing system. Stack desktop columns in a deliberate reading order and retain readable labels.

The comparison layout needs a dedicated mobile treatment. Simply shrinking the desktop table would make the text and categories harder to use.

06 / BAVORA · UI CASE STUDY

The first screen should explain the next step.

Landing page / Hero, search, destinations and package discovery



BAVORA Explore · Plan · Compare

Plan Better Trips.
Compare Smarter.
Travel Your Way.

Discover packages and compare their inclusions.

Find your next trip

From · Destination · Dates
Travelers · Budget

Popular destinations

Featured travel packages

Compare before you choose

How it works · Final planning CTA

01 / State the value

The hero connects trip planning with clearer comparison.

02 / Offer two entry points

Planning and package browsing support different starting intentions.

03 / Move from desire to detail

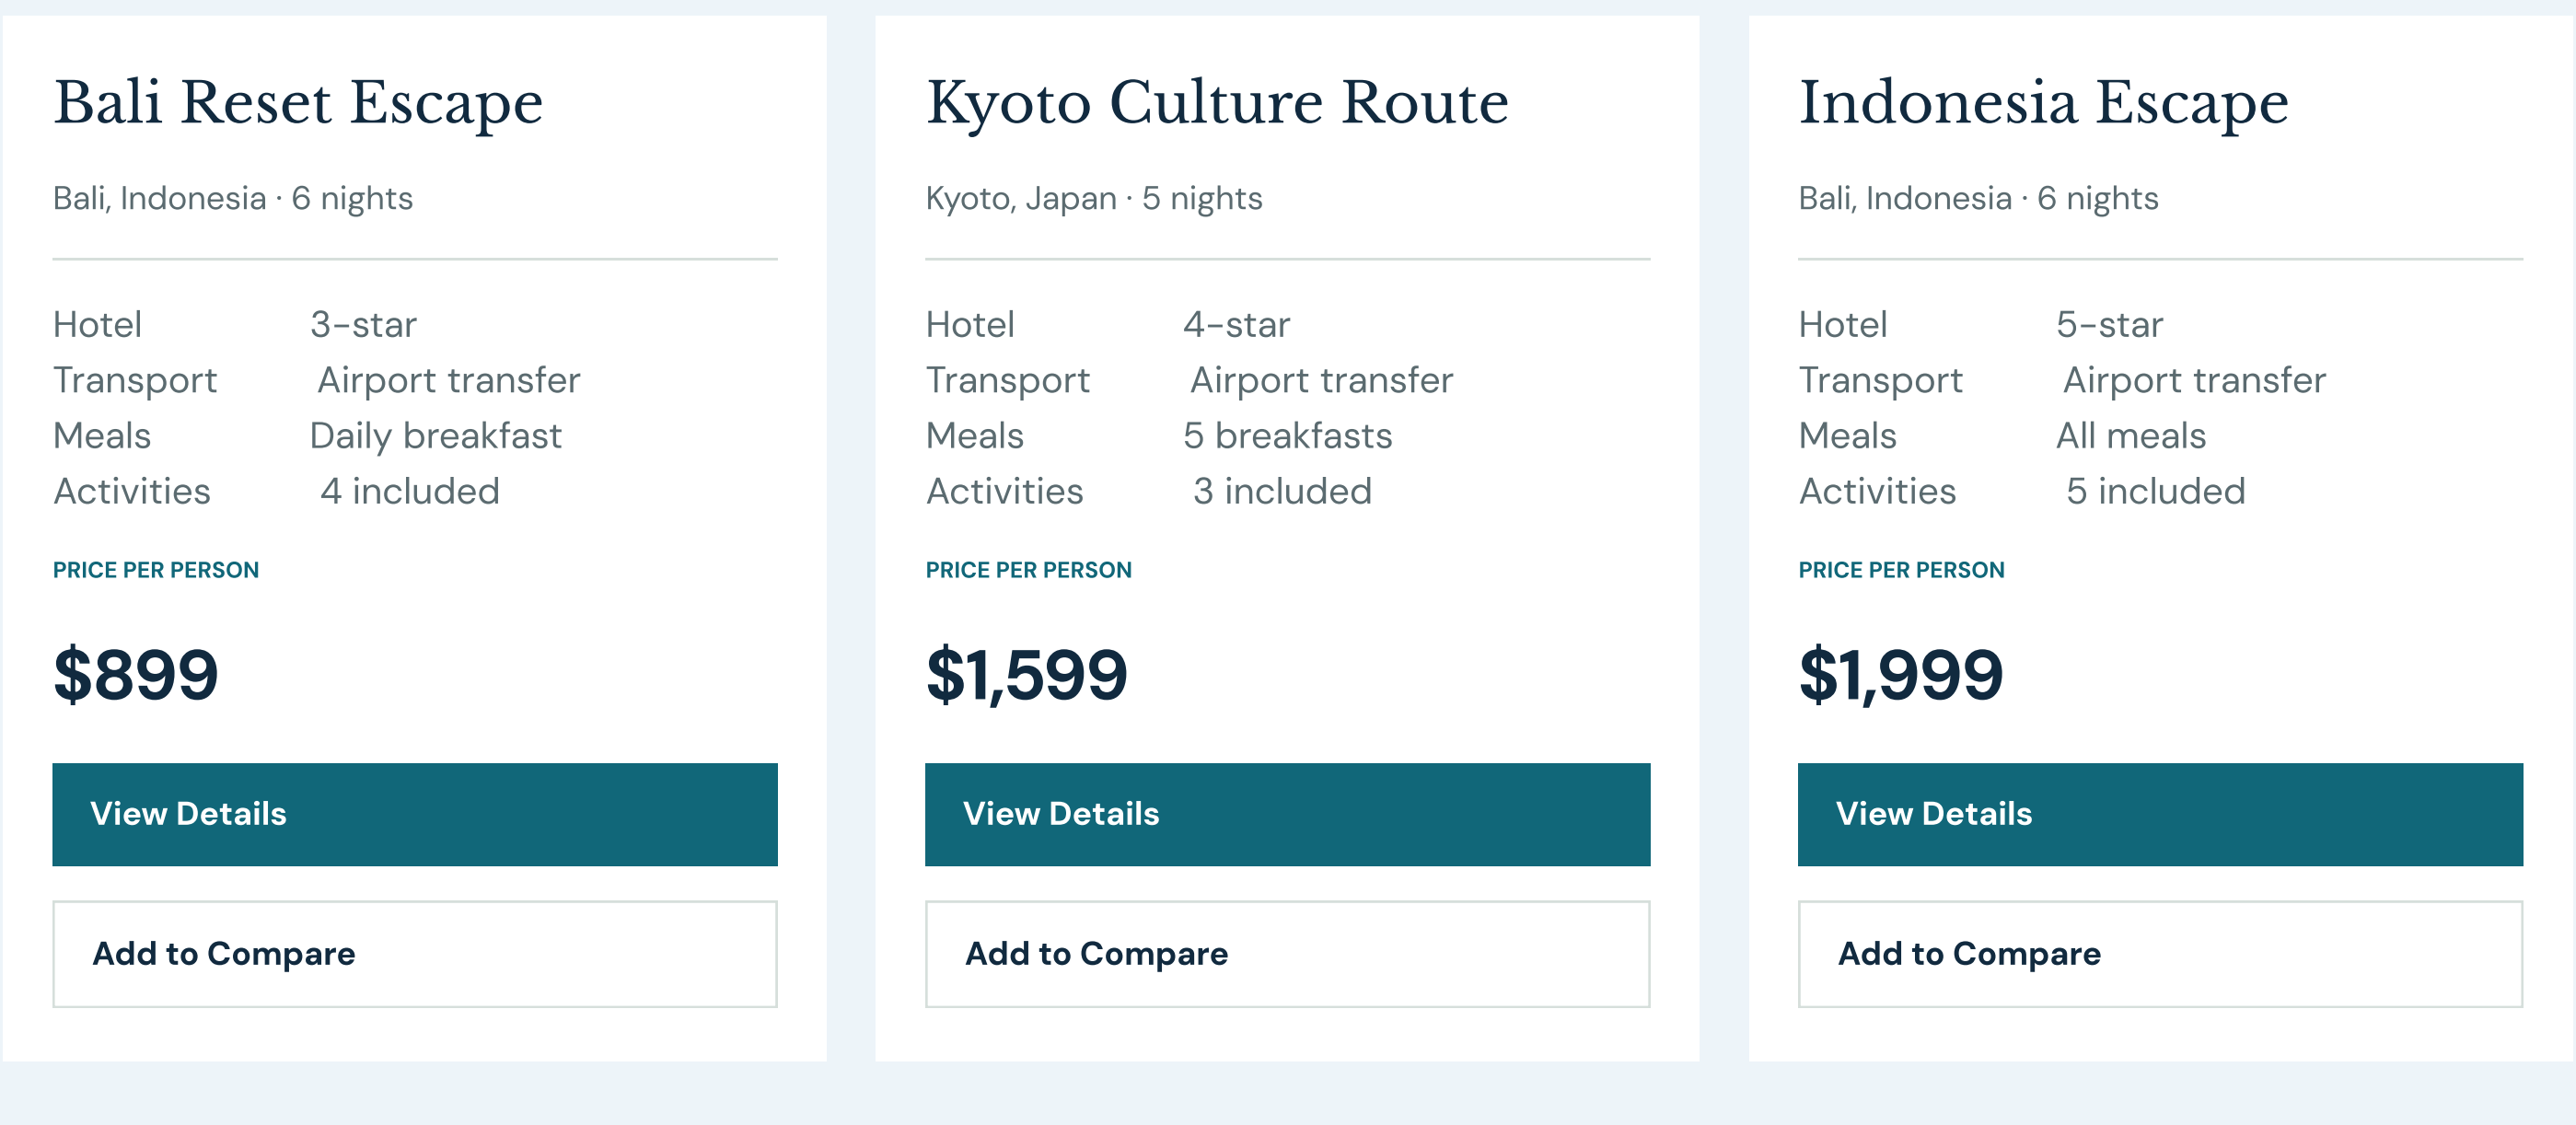
Destination imagery introduces possibilities; package facts support evaluation.

Editable hierarchy illustration based on your screen. It is a simplified reconstruction rather than an exact screen import.

07 / BAVORA · UI CASE STUDY

Design the card once. Make every option readable.

Package discovery / A repeated structure turns a busy listing into a scannable set of choices.



Bali Reset Escape	Kyoto Culture Route	Indonesia Escape
Bali, Indonesia · 6 nights	Kyoto, Japan · 5 nights	Bali, Indonesia · 6 nights
Hotel 3-star Transport Airport transfer Meals Daily breakfast Activities 4 included	Hotel 4-star Transport Airport transfer Meals 5 breakfasts Activities 3 included	Hotel 5-star Transport Airport transfer Meals All meals Activities 5 included
PRICE PER PERSON $899	PRICE PER PERSON $1,599	PRICE PER PERSON $1,999

Keep the categories stable

Every package presents the same kinds of details in the same order.

Separate the actions

View Details supports a closer look. Add to Compare supports evaluation across options.

Sample content reproduces the categories and example offers visible in the supplied landing page. These are not live prices.

08 / BAVORA · UI CASE STUDY

Comparison is the visual centerpiece.

An aligned table gives travelers a place to evaluate the trade-offs.

PACKAGE DETAILS	Bali Reset Escape	Kyoto Culture Route	Indonesia Escape
Price per person	$899	$1,599	$1,999
Duration	6 nights	5 nights	6 nights
Hotel	3-star	4-star	5-star
Transport	Airport transfer	Airport transfer	Airport transfer
Meals	Daily breakfast	5 breakfasts	All meals
Activities	4 included	3 included	5 included

Alignment replaces recall

The same row carries the same meaning across each package. Travelers can inspect differences in place.

Price stays in context

Stay, food, transport and activities sit near the cost, giving the number a practical frame of reference.

What I would refine

Keep category labels visible in a long table, clarify the selected-package limit, and test a mobile comparison layout before finalizing its interaction.

09 / BAVORA · UI CASE STUDY

Planning needs a workspace. Booking needs reassurance.

Trip planning and checkout have different information priorities.

Plan My Trip

Destinations and preferences feed a route preview and a summary. The map screen places suggested stops, geography and selected places side by side.

Traveller Details

Group traveler information, contact details, requests and stay preferences. Keep the selected package and cost summary visible as context.

01	02	03	04
Traveller details	**Review**	**Payment**	**Confirmation**
Who is traveling?	What is included?	Proposed missing step	What happens next?

Close the loop visibly.

The confirmation design combines a success mark, a booking reference and View My Trip. The itinerary then organizes activities into days and times.

10 / BAVORA · UI CASE STUDY

Supporting screens should feel like the same product.

Consistency across account, itinerary and brand pages.

Package details	Gallery · overview · highlights · inclusions · price · booking action
Itinerary	Trip status · documents · cost summary · day tabs · timed activities
Profile	Account details · trips · saved places · preferences
Login & sign up	One form task, clear labels, recovery or account-switch links
About Bavora	Purpose · comparison promise · values · routes back to planning

The supplied set contains 14 screens, including two package-listing views. This section explains their visual roles without turning the case study into an unexplained screen gallery.

11 / BAVORA · UI CASE STUDY

The small states complete the interface.

Proposed UI states and quality checks. These are next-step recommendations, not completed testing.

Default	**Focus**	**Error**	**Success**
Give every input a persistent, descriptive label.	Make keyboard focus distinct from hover.	Explain what needs fixing beside the relevant field.	Confirm the result and offer a clear next action.

Before calling the interface ready

Check text contrast, keyboard order, touch-target sizes, empty results, loading, form errors, price consistency and the mobile comparison behavior.

The source screens show the visual concept. They do not establish accessibility compliance, live authentication, payment functionality or usability improvements.

12 / BAVORA · UI CASE STUDY

What this UI work taught me.

Consistency makes the interface easier to understand, but it only helps when the content itself is organized.

The key lesson

Defining common package categories helped connect cards, detail pages and comparison. Visual hierarchy then made those categories easier to scan.

The next iteration

Standardize sample currencies and trip details, clarify custom planning versus package booking, and validate the smaller-screen experience.

My contribution

User flows, wireframes, desktop and mobile interface layouts, Auto Layout, reusable components and content hierarchy in Figma.
