A TRAVEL COMPARISON DESIGN CONCEPT

A clearer way to choose your next trip.

Bavora brings package details into a consistent structure, helping travelers understand what each option includes.

The project

Travel package discovery, comparison and trip planning.

My role

UI/UX design · user flows · wireframes · visual interfaces.

The tools

Figma · Auto Layout · reusable components · prototyping.

COMPARE THE DETAILS	Bali Reset Escape	Kyoto Culture Route	Indonesia Escape
Price per person	$899	$1,599	$1,999
Stay	3-star hotel	4-star hotel	5-star hotel
Meals	Daily breakfast	5 breakfasts	All meals

Illustrative package data drawn from the supplied landing-page design. Not live offers.

PROJECT OVERVIEW

One experience, several connected decisions.

A portfolio case study of the supplied Bavora interface designs.

What I designed

An interface for exploring travel packages, viewing inclusions, comparing options, planning a route, and moving through booking.

Why it matters

A price is difficult to evaluate without context. The same package information needs to be easy to find and compare across options.

DESIGN QUESTION

How might we help travelers compare packages without repeatedly switching between pages?

The design responds with consistent categories, predictable package cards and an explicit comparison view.

Scope

14 supplied interface screens, covering discovery, planning, booking and account management.

Evidence boundary

The screens and project brief support the design narrative. No interviews, usability-test results or business outcomes were supplied.

THE PROBLEM

Different formats. An unclear comparison.

Travelers struggle to compare offers when pricing, hotels, activities and inclusions are presented differently.

01 / INCONSISTENT DETAILS

The same information appears in different places.

Use a repeated order for price, duration, stay, transport, meals and activities.

02 / PRICE WITHOUT CONTEXT

The lowest price does not explain the full offer.

Place the price beside the inclusions that help explain it.

03 / TOO MUCH BACK-AND-FORTH

Separate detail pages create a memory task.

Bring selected packages into one aligned comparison.

WORKING ASSUMPTION

Travelers need to understand trade-offs, not just see more options.

This is a design hypothesis to validate, rather than a research finding.

INFORMATION ARCHITECTURE

Organize around what travelers need to do.

A proposed structure derived from the supplied screens. Payment and a trip-list view fill visible gaps in the journey.

Discover & evaluate

- Home
- Explore Packages
- Package Details
- Compare Packages

Plan a trip

- Trip Preferences
- Route & Stops
- Trip Summary

Book a package

- Traveller Details
- Review Booking
- Payment — proposed
- Booking Confirmation

Account & trips

- Login / Sign Up
- Profile
- My Trips — proposed
- Itinerary

NAMING DECISION

Separate “Route & Stops” from “My Trips”.

The map workspace supports building a route. My Trips should hold saved or booked trips. Distinct labels clarify the difference.

Supporting information: About Bavora · Help · Cancellation policy · Terms & privacy (proposed).

USER JOURNEYS

Different starting points. A clear next step.

These are intended journeys through the design; they do not imply a tested or working booking service.

Package-led journey

01 **Explore**
02 **Package details**
03 **Traveller details**
04 **Review & payment**
05 **Confirmation**

Comparison-led journey

01 **Explore**
02 **Add to compare**
03 **Compare packages**
04 **Choose package**
05 **Booking**

Custom-trip journey

01 **Preferences**
02 **Route & stops**
03 **Trip summary**
04 **Review**
05 **Booking**

SCREEN FOCUS / LANDING PAGE

From inspiration to a useful first action.

The homepage introduces the service and provides routes into exploration, comparison and planning.

BAVORA Explore · Plan · Compare

Plan Better Trips.
Compare Smarter.
Travel Your Way.

Discover packages and understand their inclusions.

Plan My Trip / Explore Packages

Search: destination · dates · travelers · budget

Popular destinations

Featured packages

Comparison preview

Four planning steps + final call to action

01 / A clear promise

The hero states the value of the experience before asking for detailed preferences.

02 / Two starting points

Plan My Trip serves travelers with preferences; Explore Packages serves those still browsing.

03 / A practical search strip

Destination, dates, travelers and budget translate inspiration into a search task.

04 / Progressive detail

Destination and package cards introduce options before the comparison preview explains how to evaluate them.

SCREEN FOCUS / COMPARISON

Make the differences easier to see.

The central design decision is a common information structure across selected packages.

PACKAGE DETAILS	Bali Reset Escape	Kyoto Culture Route	Indonesia Escape
Price per person	$899	$1,599	$1,999
Duration	6 nights	5 nights	6 nights
Hotel	3-star	4-star	5-star
Transport	Airport transfer	Airport transfer	Airport transfer
Meals	Daily breakfast	5 breakfasts	All meals
Activities	4 included	3 included	5 included

Editable reconstruction of comparison content visible in the supplied landing page; sample package data only.

Keep categories aligned

Shared rows put the same detail in the same location for every option.

Keep the decision with the detail

A next-step action belongs to each package, allowing travelers to choose an option after reviewing it.

SCREEN FOCUS / PLANNING & BOOKING

Keep context close to the decision.

Planning and checkout ask for different kinds of information. Their layouts should reflect that distinction.

Plan My Trip

Destinations → preferences → route

Suggested places | Route map | Selected stops

The map workspace connects suggested places and current selections with the geography of the trip.

Traveller details

Selected package + booking summary

- Traveler information
- Contact details
- Special requests
- Room preferences

Grouped fields and a visible summary preserve the context of the chosen package.

COMPLETION STATE

“Your Trip is Confirmed” closes the journey.

The confirmation design uses a success mark, booking reference and View My Trip action to communicate the intended result.

To validate: form errors, payment handoff, cost changes, keyboard navigation and recovery from interruptions.

THE SUPPLIED INTERFACE SET

A complete picture of the designed experience.

Fourteen screens grouped by purpose, rather than presented as an unexplained gallery.

Discovery	**Landing page · Explore packages · Extended listing · Package details** Help travelers move from inspiration to an informed shortlist.
Evaluation	**Compare packages** Bring pricing and inclusions into a common structure.
Planning	**Plan My Trip · Route & Stops** Turn preferences into a route and selected places.
Booking	**Traveller details · Booking confirmation** Collect information and establish a clear completion state.
Management	**Itinerary · Profile** Organize daily activities and account-level travel information.
Supporting	**Login · Sign up · About** Provide account entry and explain the service promise.

VISUAL DESIGN

Let the information do the heavy lifting.

A restrained visual language carries through the travel experience.

Navy & teal

Navy anchors navigation and important actions. Teal distinguishes planning, search and comparison areas.

Clear hierarchy

Large editorial headings introduce sections. Smaller, consistent labels organize practical package information.

Navy / navigation	Teal / actions	Pale blue / surface	Paper / case study
#142A3C	#126275	#EAF3F7	#F7F5EF

LAYOUT PRINCIPLE

Repeat what helps scanning. Vary what tells the story.

Consistent package categories support comparison. The case study uses a measured editorial rhythm instead of repeating the same decorative card layout.

Case-study typography: Libre Baskerville for editorial headings; DM Sans for body copy and interface details.

NEXT STEPS / PROPOSED VALIDATION

The next step is to put it in people’s hands.

The designs establish a direction. The next stage is to test whether that direction supports real travel decisions.

Find a suitable package Ask travelers to choose a package for a stated budget and trip preference.	Observe filter use, information gaps and hesitation.
Explain a comparison Ask travelers to compare three packages and explain their choice.	Observe whether shared categories support trade-off decisions.
Continue on mobile Repeat the comparison task on a smaller screen.	Check category visibility, text readability and interaction effort.
Complete a booking task Use an interactive prototype with realistic form states.	Check errors, cost comprehension and recovery.

SUCCESS MEASURES TO COLLECT

Task completion · time on task · errors · confidence

These are proposed measures. No sample size, test results or improvement percentages are claimed.

REFLECTION

Clarity begins with the information.

Bavora helped me connect page-level design decisions to a larger travel journey.

What this project taught me

A comparison experience depends on consistent content as much as visual layout. Defining shared categories gives each screen a clearer role in the decision.

What I would refine next

Standardize sample currencies and trip details, clarify custom planning versus ready-made packages, and test the mobile comparison behavior.

MY CONTRIBUTION

User flows. Interface structure. Responsive layouts.

Designed in Figma with Auto Layout, reusable components and attention to content hierarchy.

EDITING THIS FILE

All narrative text, layouts, tables, diagrams and screen abstractions are native editable layers. Screen examples are simplified reconstructions, not pixel-perfect imports of the original UI.
